PERMANENT CAPITAL · PREFERRED PARTNERSHIP

Business Plan

The Robot Services Exchange — open marketplace for robot labor

1. Executive summary

Permanent / long-dated capital (10–15+ years). Preferred commercial rights deepen only as network metrics improve. That capital is what the Hyperion Fund deploys into automation-ready, income-producing businesses. Principal stays in; only earned profits transfer out.

Mickey Shaughnessy (creator) is in and is not seeking a sponsor. Then 3× Founding Partner spots (named individual + sponsor); more may be added. Even equity split among Mickey and the named individuals (10-year vest). Pair terms: hiring.html. The seat-price dial on the investors page runs from $0 to $100k. Base is $25k. A seat issued with `POST /seats/issue` is still free.

The ask

Permanent or long-dated capital. Planning dials on the investors page: $100M / $500M / $2B. Preferred rights. Not a public offering.

Use of capital

Exchange reliability and matching, density, seat ops, franchise support, team. Hyperion first wave on p. 3. No escrow.

2. Problem

Robot labor is arriving; the market is still closed fleets, one-off integrations, and opaque prices. No portable reputation. No open book where any buyer can submit a bid and any capable provider can grab the job.

3. Solution

Demand submits a bid on the website (job, price, location). Supply grabs the job at rse-api.com (`POST /grab_job`). Both sides sign the job (`POST /sign_job`). Seats (Exchange registry, assigned by Mickey Shaughnessy; fully transferable) gate grab access when verification is on. Settlement stays between the parties. Website for people; API for machines.

4. Market

Physical work that can be specified, matched, and signed. Base scenario: ~$30T robot-labor GMV in 2040 (~half of ~$60T 2025 human labor). That GMV is recorded, not collected: no escrow, and the take-rate is zero. Seven earning streams. Seat issuance is the bulk of modeled revenue (peak near $12.5T in 2035 at $25k × 500M new seats). Scenario planning, not a forecast.

5. Product → revenue

LAYER	TODAY	REVENUE PATH
Submit bid	Website: job, price, location; open until grabbed	Campaigns for bulk demand
Grab job	POST `/grab_job` — location + AI + reputation + price	Seat-gated supply; job parties for multi-agent work
Sign job	POST `/sign_job` — mutual 1–5 stars; public portfolios	Portable proofs; seat / username identity
Payments	Parties settle. Exchange records the price. No escrow.	Stays that way. Take-rate is zero. Why
Disputes	Either party can file; admin review	Insurance & SLA for institutional volume

Live API and public counters are on production.

6. Value streams

01 **No job take** — GMV is jobs cleared. The exchange does not hold the money and does not take a cut. payments.html

02 **Seats** — modeled primary price, base $25k. The investors-page dial runs from $0 to $100k. ~1B seats 2031–2035 (peak 2035 · ~500M / ~$12.5T at the base price). Bulk of modeled revenue. Issuance to a demand or supply account stays free.

03 **Hardware** — Catalog referral + financing ($25k ASP, 3% + 40% attach × 1.5%).

04 **/nearby & attention** — Two-sided placement as density rises.

05 **Franchises** — Garage + Lighthouse: new-site fees + royalties.

06 **Hyperion fees** — ~2.8% of AUM (1% management + performance). See p. 3.

07 **Insurance & SLA** — Overlay: GMV × 25% institutional × 1.8% premium × 15% cut.

08 **Design** — Overlay: task, workflow, job-party, and capability-package design.

7. Go-to-market

- Design partners with fleet or facility demand
- Garage and Lighthouse as density nodes
- Hardware catalog + financing
- Preferred rights that scale with performance — not territorial monopolies

8. Competition

Closed fleets and vertical SaaS optimize one operator or one buyer. Human-services marketplaces lack seats, hardware, and franchise density. Partner rights here are earned by performance.

9. The Hyperion Fund

The Fund buys automation-ready, income-producing small businesses and puts seated robot labor on the work those businesses already sell. Platform take ≈ 2.8% of AUM (1% management + 15% of ~12% gross). Principal stays in. Only earned profits may transfer out.

Mandate

Buy the book. Attach matching, design, franchises, and seated providers. Liquid markets keep unused cash invested until a deal closes.

Service businesses
Short-term rental management, landscaping, housekeeping, home services, and home health aides. The Fund buys the book. A supply account grabs the job.

Short-term rental properties
Homes with occupancy already running. Some stay owned and operated. Turnover is the job party the management company already sells.

First wave (planning)

SLEEVE	PLAN	PLAYBOOK
STR management	~12 properties	Buy the homes and the management book. Turnover is a hospitality job party: clean, linen, restock, inspect. Franchise once the spec holds.
Landscaping	Local route books	Mowing, seasonal cleanup, and recurring contracts. Own and operate first; franchise when the route spec repeats.
Housekeeping	Recurring home cleans	The same turnover job party, sold to residents who are not on the short-term rental book.
Home services	Handyman and light repair	Existing dispatch books. The business posts the job; a seated provider grabs it.
Home health aides	~4 books	Lakewood, Camas, Destin, Missoula, Austin, Boulder. Clinical work stays human; robots take the non-clinical load.
Liquid + emerging	Residual AUM	Stocks, crypto, bonds until an operating deal closes.

Counts are a first-wave plan, not specific addresses. Later waves: buy the book, attach robot services, keep or franchise. Asset income stays in the Fund; the exchange earns the fee.

10. Team

Pair map, salary, housing, and the apply form: hiring.html. The model includes a 1M-seat founding tranche at the seat-price dial (base $25k). Non-competes run 1–2 years and are limited to competing robot-labor exchanges. Termination terms sit in the definitive documents.

11. Permanent capital & preferred partnership

Permanent / evergreen or 15-year+ vehicles. No forced exit clock. Partners get equity plus **preferred commercial rights** that do not freeze the open market:

- Priority matching in defined categories or geographies
- Preferential data access and referral economics
- First-look on hardware or franchise opportunities
- Rights deepen *only* when GMV, density, seats, and jobs improve

> **Variable deepening.** Underperformance does not expand rights. Term: 10–15+ years, with performance step-ups.

12. Why this structure

Ten-year fund clocks force premature exits. Permanent capital lets the exchange optimize for density over decades. Performance-ratcheted rights align without hard exclusivity.

13. Financial orientation

DIAL (INVESTORS PAGE)	BASE	ROLE
2040 GMV	$30.0T	Jobs cleared. Not collected. ~half of ~$60T 2025 human labor.
Job take	0%	No escrow. Parties settle. Not a dial.
Seat price	$25k	Base of the investors-page dial. The dial runs from $0 to $100k per seat. Issuance stays free.
Network scale	1.00×	Multiplies seats, hardware, ads, franchises, Hyperion, design
Raise scenarios	$100M / $500M / $2B	Conservative / base / aggressive planning dials

15-year projections, cost ratios, and DCF tooling live on the investors page. Insurance and design are first-cut overlays. Scenario planning, not guarantees.

14. Key risks

RISK	RESPONSE
Density fails	Rights deepen only with metrics. Stay open and API-first.
No take on jobs	Policy. Seats are the bulk of modeled revenue. The other streams recur.
Hard exclusivity kills liquidity	Rights are preferential and performance-triggered, not monopolies.
Talent vs capital horizons	10-year vest against 10–15+ year capital. Termination terms sit in the definitive documents.
Regulatory / insurance	Insurance/SLA is an explicit stream; disputes already have an admin path.
Ambitious model	Interactive scenarios; conservative dials exist. Alignment does not require the aggressive case.
Hyperion underperforms	Principal locked. Liquid sleeve beside real assets. Exchange earns AUM fees either way.

15. The ask

See §1. Raise size uses the investors-page dials. Final terms are in definitive documents.

16. Use of funds

1. Exchange reliability and matching. No escrow.
2. Density: seats, fleets, buyers, campaigns
3. Hyperion first wave (p. 3)
4. Compliance, seat ops, Hyperion admin, insurance/SLA partners
5. Franchise support (Garage, Lighthouse) and hardware referrals
6. Design services capacity
7. Core team

17. Next steps

1. Live 15-year model: `therobotservicesexchange.com/investors.html`
2. Hyperion Fund: section 9 of this plan
3. Hiring terms: `therobotservicesexchange.com/hiring.html`
4. Discuss structure, preferred rights, and Founding Partner terms with the creator
